A working view of the institution.

STANAIC workflow demonstration

A review environment connecting the public website with membership, learning, research publishing and administrative workflows. It is ready for structured feedback; production policies and external services remain separate.

Open the public demo | Open the operational sandbox

What can be reviewed now

Area	Available in the demonstration
Institutional website	Clean public URLs; institution and governance pages; research library with search and filters; journal, membership and partner-learning information.
Membership	Invitation, profile and consent, maintainer review, approved designation and administrator decision. The existing onboarding process remains a separate module.
Learning and assessment	Original sample course; enrolment, lesson completion, server grading, independent assessor review and registrar-controlled sample completion records.
Journal workflow	Anonymised text/PDF submission, private attachments, assigned reviewer, revision, editorial decision, author proof and publication states.
Finance and communications	Isolated payment/refund simulations; notification previews; member-welcome text and image editor with corporate/personal wording.
Oversight and assistance	13 operational roles, permission checks, activity history, readiness states and a public-source knowledge guide. Optional model assistance is not connected.

Review boundary. Use fictional information. Sandbox money, emails, appointments and completion records have no institutional effect. Partner courses are linked, not copied or enrolled automatically.

Follow the work. Review the decisions.

A practical review sequence

Journey	Steps to try	Responsible roles
Membership	Invite a sample member; submit details and consent; review completeness; approve designation; open the sample welcome studio.	Member, maintainer, secretariat administrator
Learning	Create a free sample order; complete 3 lessons; submit the 5-question assessment; review evidence; issue and verify a sample record.	Learner, assessor, registrar
Research	Submit an anonymised manuscript; screen; review; request revision or accept; obtain author proof; publish within the sandbox.	Author, editor, reviewer
Finance	Create a paid sample course/order; simulate confirmation; check access; request and approve a sample refund.	Course administrator, learner, finance
Communications	Edit a fictional welcome, choose corporate or personal wording, regenerate text, download the PNG and copy the message.	Authorised communications reviewer

Access and useful links

Operational sandbox - no real account required; use the simulation-role selector.
Existing onboarding demo - public test accounts are shown on its sign-in page.
Sample welcome studio - export only.
Architecture and workflow details - current implementation and planning context.

Feedback requested

Please review navigation, missing fields, approval ownership, membership designations, course/assessment rules, journal policies and the order of each handoff. Share specific changes or a short example of the expected process.

What follows the review

The workflows can be simplified or automated further around the team's preferred way of working. Once feedback is agreed, the next phase can add approved reminders, recurring jobs, partner integrations and authorised external services. Editorial judgement, institutional appointments and high-impact approvals should remain under the appropriate people.

Companion document: Technical Architecture and Demo Access. It explains role boundaries, test logins, server-side credential categories and production prerequisites.
